

- 5 What is claimed is:
1. An overflow system for a bathtub which has a
bottom, and adjacent side and endwalls, a drain port in
the bottom, and overflow port in an endwall, comprising,
a drain pipe adapted to be in communication with said
10 drain port and said overflow port,
said drain pipe having an inverted L-shape, including a
horizontal leg extending into and through the
overflow part of the bathtub, and a vertical leg
extending downwardly for connection to a fluid
15 drain system,
and a solid cap threaded into interior threads of the
horizontal leg extending through the overflow port
to close the end of the horizontal leg.
- 20 2. A plumbing test system comprising,
a pipe having a first exposed end and second end in
communication with a fluid source, wherein the
first end comprises an internal threaded portion;
a cap assembly threadably mounted in the first end and
25 wherein a portion of the cap assembly is composed
of a material capable of sealing the first end when
the cap is threaded onto the first end.
